I thought it was worth noting that Kodi 16.1 is still available for LinHES 8.5.1, but it is not usable as a mythtv frontend because the built-in mythtv client only works up to MythTV 0.28. It appears that Kodi 17 is required for MythTV 29 support.

02/24/2018 01:21 pm - knappster

I've compiled the kodi 17.6 binary on a development virtualbox machine and installed the package on my production machine this morning. So far things appear to be functioning well. (Unable to attach PKGBUILD)

02/24/2018 04:50 pm - knappster

I've uploaded the PKGBUILD and binary files to the following google drive:
https://drive.google.com/open?id=1oXjTK_4rlxHx6v2HqQGqOlwpbqWICscm

03/04/2018 01:07 pm - knappster

I noticed some ssl errors were thrown by some addons which would either crash kodi or prevent the addon from working, so I have added a folder for an updated python cryptography package and PKGBUILD. I compiled with "makepkg --nocheck"
