

LinHES - Bug # 118: add ext4 filesystem

| | | | |
|---------------------|--|------------------|------------|
| Status: | Closed | Priority: | Normal |
| Author: | Human | Category: | |
| Created: | 01/13/2009 | Assignee: | jams |
| Updated: | 03/20/2010 | Due date: | 12/31/1969 |
| Description: | ext4 is stable as of kernel 2.6.28 (current R6 ISO contains 2.6.27). Consider adding ext4 as an option for LinHES. | | |

Everything is now in place, just need to update the kernel.

Just installed on a Dragon 2.x system with ext4 as / and /myth, and post-install reboot shows "No bootable device -- please insert boot disk and press any key"

I'll re-try with ext3 to make sure the problem isn't more fundamental than FS type.

I had the same problem with ext3, so whatever is wrong is not ext4-related.
