LinHES - Bug # 163: popup status window uses a suboptimal part of the main background

Status:	Closed	**Priority:**	Normal
Author:	Human	**Category:**	
Created:	01/25/2009	**Assignee:**	cecil
Updated:	11/10/2011	**Due date:**	12/31/1969
Description:	In git HEAD version I just built, the default installer theme now says LinHES in the background, which is cool, but the popup status window for network detection (and possibly other things) displays a truncated portion of the background that contains part of the first few letters of LinHES.		
	Possible remedies:		
	1) If MythUI (or whatever is appropriate) can be told where to pull background images for popup windows, tell it to pull from the center of the background.		
	2) Move the LinHES text to somewhere other than the top.		
	3) Move the LinHES text so that it looks right in the portion of the background that it used for popup status windows.

4) Remove logo from the BG, and overlay it with the image tag.

1) Looked, but cannot find where it is doing this....

2) Hmmmm. I suppose LinHES could be moved to the left and the logo to the right.

3) Would have to play around w/ the position.

4) Found where to put this..

pacman -Sy && pacman -S linhes-theme3 then select it in Appearance. Let me know what you think.
