LinHES - Bug # 175: X install for HD fails in 6.00.06 upgrade

Status:	Closed	**Priority:**	High
Author:	tjc	**Category:**	
Created:	02/11/2009	**Assignee:**	
Updated:	04/03/2009	**Due date:**	
Description:	Installing/upgrading 6.00.06 from a CD, xconfig.sh script works correctly from the CD but the HD seems to get left behind.		

- correct nvidia driver isn't installed

- /etc/X11/xorg.conf isn't quite right

This may be due to the /etc/pacman.conf problems previously noted.

As a result the FE doesn't start at boot time instead you see:

```
<code>
Starting LinHES frontend
Starting LinHES frontend
Starting LinHES frontend
Frontend is not able to start, disabling it.
</code>
```

Seems to work for a fresh install, although during the "preparing for life" phase the "installing 96xx" message shows up at least two different times. What's up with that?

02/21/2009 02:23 am - tjc

Mostly works on an upgrade from R5.5. Previous problem occurred with upgrading from an R6 alpha/beta version. The remaining problems are the weird X resolution issue covered elsewhere so it might be time to close this.

Similar to other nvidia problems
