

LinHES - Bug # 238: "Use your own config" setting on Video Setup doesn't seem to do anything

Status:	Closed	Priority:	Normal
Author:	nickca	Category:	
Created:	02/26/2009	Assignee:	
Updated:	12/25/2011	Due date:	12/31/1969
Description:	<p>The "use your own config" option in the LinHES Video Setup doesn't seem to do anything. I have my xorg.conf in /data/home/mythtv/templates/xorg.user, but whenever I check or uncheck the box, it overwrites /etc/X11/xorg.conf with the default configuration file. I found this section in /usr/MythVantage/bin/xconfig.sh:</p> <pre>if [-f "\$BASE/data/home/mythtv/templates/xorg.user"] then cp -f "\$BASE/data/home/mythtv/templates/xorg.user" "\$XORG_CONF" else</pre> <p>I don't see anywhere where that \$XORG_CONF variable is defined. The script sources /etc/profile, but it's not in there either.</p>		

History

It's defined at the bottom of xconfig.sh.

The process appears to work as expected, but I did make a change to the expected location of the user file.

Please update LinHES-config and try again, with the user file in /home/mythtv/templates/xorg.user

X will not restart by itself after xconfig.sh runs but it will change xorg.conf.

After updating LinHES-config, it now works with the file in /home/mythtv/templates/xorg.user.

Is this going to be the new location for all user-supplied config files going forward? For example, I currently have smb.conf in /data/home/mythtv/templates/, and the configuration script still looks for it there after the update.

I was wondering about the location too. IMO config files that affect the whole system should belong to root and be in some "preserved" directory like "/myth/templates". While "/home/mythtv" is backed up and restored that may happen later than is desirable in the general case. A single consistent location would also be good.
