| <b>Description:</b> | This is the underlying cause of FS#110. The LinHES theme does not properly gray out (or otherwise indicate as unselectable) GUI elements that cannot be selected. Because of this, the user may expect to freely navigate forwards and backwards in certain setup dialogs that are, in fact, single screens without a history to go "back" to. |                  |                |
