Description:	I just did a fresh auto-install on an alternate drive to check some things. During CD install I chose "Update All". Otherwise everything is pretty much defaults and I have made no modifications, the oven is still warm.
	Through MythTV ("Media Library" > "Watch Videos") I tried to play three types of .mov files: h264, photo-jpeg and sorensen. My memory is that all three of these types played in an out-of-the-box Knoppmyth r5.5 install.
	Attempt to play yields this in mythfrontend.log...
	//2009-03-08 12:42:07.158 XMLParse::LoadTheme using /usr/share/mythtv/themes/default/video-ui.xml sh: mplayer-resumer.pl: command not found//
	(I hope I'm not repeating a task! If I am, sorry. I did a cursory look through flyspray and search for the error.)
