

LinHES - Bug # 295: pacman upgrade kills serial irblaster/receiver and xorg.conf

Status:	Closed	Priority:	Normal
Author:	mihanson	Category:	
Created:	03/17/2009	Assignee:	jams
Updated:	03/20/2010	Due date:	
Description:	<p>A recent (in the past 72 hrs) upgrade via pacman -Syu unconfigured my serial port ir blaster on my mbe and unconfigured my serial port ir receiver on a frontend. The mbe had lircd taken out of /etc/sv so it would not start and it appears the /usr/bin/chan_change.sh script was overwritten with a "clean" version ("remote=none" was the issue there). On the fe, /etc/lircd.conf was overwritten with an empty file.</p> <p>The xorg.conf on the mbe was overwritten with a "clean" version. I need a server flag set so I can use the keyboard after starting X, but it was no longer there. See task #167 for what I mean.</p>

Also, HAL daemon was not running, but I recall it running before.
