LIRC is compiled with --drivers=all so, all drivers should be built with the expectation of || and another (I forget as it is broken). If there is a specific driver that is missing, we need specific details. I'll look into the iguanaIR, any link you can provide would be helpful.

iguanaIR has been implemented and tested successfully by James.

sudo pacman -Sy lirc iguanaIR

12/25/2011 03:06 pm - jams

- Target version changed from 7.2 to 6.00.04
