

LinHES - Bug # 383: perl-javascript seg. faulting

Status:	Closed	Priority:	Normal
Author:	bigtoedsloth	Category:	Packages: Core
Created:	06/10/2009	Assignee:	brfransen
Updated:	08/06/2011	Due date:	
Description:	This is related to [[http://linhes.org/flyspray/index.php?do=details&task_id=282 report 282]] and the perl dependencies of the Shepherd tv_grab_au script. The two most important grabbers use the perl JavaScript module and both produce a segmentation fault when using the perl-javascript package. I uninstalled perl-javascript (keeping the spidermonkey dependency) and reinstalled the JavaScript module using cpan. Now the scripts work, or at least are no longer seg. faulting.

Can you please provide more information. Others have report no issue w/ the package. Perhaps an output of the segfault.

06/12/2009 08:24 am - bigtoedsloth

This is the type of thing I was seeing in /var/log/messages.log

Jun 9 09:45:08 mythbox news[7327]: segfault at 465475 ip b7fbe4f0 sp bfc72990 error 4 in libpthread-2.9.so[b7fb7000+14000]

Jun 9 09:45:08 mythbox rex[7331]: segfault at 4499a38a ip b7ee64f0 sp bff9b4c0 error 4 in libpthread-2.9.so[b7edf000+14000]

And the code which dies is the following (actually the \$jsc->eval line)

<code>

```
sub setup_javascript
{
    print "Initializing JavaScript interpreter.\n" if ($debug);
    $jsc = new JavaScript::Runtime->create_context();
    $jsc->set_error_handler( sub { } ) if (exists(&JavaScript::Context::set_error_handler));
    $jsc->eval(qq{
        var doc = ";
```

```
function Location() { this.href = '$DATASOURCE'; }
function Document() { this.write = function(x) { doc += x; } }
function Window() { this.__ww = 0 }
location = new Location;
document = new Document;
window = new Window;
});
}
```

</code>

When I installed the JavaScript module I was asked if spidermonkey was threadsafe, to which I answered yes (after checking the compile flags in http://knoppmyth.net/repo/src_packages/extra-testing/spidermonkey-1.7.0-2.src.tar.gz). All of the tests passed fine.

07/03/2009 05:10 am - soundoff

I am having a similar problem to others with shepherd segfaulting.

R6.0.0.8 Fresh Install. Then I installed shepherd using:

```
<code>sudo -Sy shepherd-dep
cd~
wget http://www.whuffy.com/shepherd/shepherd
perl shepherd</code>
```

The install worked great. Even grabbed nice channel icons for me. very cool.

I then ran mythfilldatabase and it segfaulted.. so i did the following:

```
<code>
[root@myhtv ~]# pacman -Sy shepherd-dep
:: Synchronizing package databases...
core-testing is up to date
extra-testing is up to date
shepherd-dep package not found, searching for group...
:: group shepherd-dep (including ignored packages):

2009-07-03 19:52:50.407 XMLTV config file is: /home/myhtv/.myhtv/DigitalTV.xmltv
sh: line 1: 17259 Segmentation fault    PERL5LIB="/home/myhtv/.shepherd/references" /home/myhtv/.shepherd/grabbers/news/news --region 75
--output /home/myhtv/.shepherd/grabbers/news/output-0.xmltv --days 8 --channels_file /home/myhtv/.shepherd/channels.conf.tmp 2>&1
sh: line 1: 17263 Segmentation fault    PERL5LIB="/home/myhtv/.shepherd/references" /home/myhtv/.shepherd/grabbers/rex/rex --region 75 --output
/home/myhtv/.shepherd/grabbers/rex/output-0.xmltv --days 8 --channels_file /home/myhtv/.shepherd/channels.conf.tmp 2>&1</code>
```

Any help would be greatly appreciated. I am so close to having a fully functioning myth system again!! Please let me know if there is any further info i can provide

07/22/2009 09:26 pm - harveythedog

Same segfault problem here on a fresh R6.00.08

Shepherd installed "sudo pacman -S shepherd" no problems.

Both rex and news grabbers show "failed code 139" in "~/.shepherd/shepherd --status" and shepherd.log

```
06:03:11 HTPC news[14848]: segfault at 2d ip b7ee74f0 sp bfa9bfc0 error 4 in libpthread-2.9.so[b7ee0000+14000]
06:03:11 HTPC rex[14852]: segfault at 8000000d ip b7f4c4f0 sp bfd00a30 error 4 in libpthread-2.9.so[b7f45000+14000]
```

Unless users run shepherd(mythfilldatabase) manually, or check their shepherd.log file they probably will not be aware of this problem as other grabbers within shepherd will usually be able to provide tv data. Running something like "mythfilldatabase --graboptions '-notquiet --notimetest'" would let you watch shepherd run and perhaps be helpful?

01/06/2010 08:01 pm - bigb

I installed JavaScript using cpan and answered 'yes' for threadsafe spidermonkey, then 'no' for the other questions. The compile proceeded a lot better than when i had answered 'no' for threadsafe.

Do this has stopped the seg faults, and shepherd now uses the news and rex grabbers successfully. Attempts where I'd answered no for threadsafe didn't not fix my issues.
