Description:	Hi ...		

Don't know how it is called that funnny little menue from manin menu ... pressing m ... shows a small popup menu with shutdon / reboot / version / cancel / exit ...

shutdown works but reoot does not do anything ...

reboot works for me.

07/20/2009 10:46 am - jams

check the reboot settings in the myth settings. You probably need to add a sudo in front of the reboot command

07/20/2009 10:57 am - martin1802

yes that's it :-) works now with "sudo reboot" ...

maybe it has to be changed for setup / upgrade process?

This does work out the box. Was this a slave or a remote frontend you were adding?

I found the same bug as Martin, no reboot from a 5.5 upgrade on my FE/MBE unit. Easy enough fix though.

08/04/2009 03:43 am - GregFrost

what was in as the reboot command if it wasnt sudo reboot?

08/04/2009 03:46 am - martin1802

Hi Greg,

only 'reboot' inside ... my system is a FE/MBE upgraded from R5.5 to R6.00.08 done with ISO upgrade

Martin

Agree again with Martin. Same 'reboot' only, same upgrade type as well. Adding sudo was the fix.
