

LinHES - Bug # 450: tightvnc, likely other stuff broken by libjpeg update

Status:	Closed	Priority:	Normal
Author:	nickca	Category:	
Created:	07/24/2009	Assignee:	
Updated:	07/25/2009	Due date:	
Description:	The same problem that was just fixed in mplayer (won't load due to expecting libjpeg 6.2) is still present in tightvnc, and likely quite a few other packages, but tightvnc is the only one I've encountered so far.

Also from craigtv on the forum:

<code>Did another pacman update and saw feh and a few others come through, and that did fix my desktop.

I've been trying everything else out, and found MP4Box is also failing on libjpeg.so.62. That's causing myth2ipod to fail.

I found that ldd can be used to find things that need libs that are not installed. Perhaps a script to check all .so files and executable files in /lib /usr/lib /usr/local/lib /bin /usr/bin/ /usr/local/bin /src/ /usr/sbin would be useful. I recompiled a number of things recently that I found to be a problem using ldd.

Perhaps if we made kmsync do a pacman -Syu followed by running the ldd checker script, we could prevent this from happening in the future?

I have rebuilt enough stuff now that nothing I have installed on my system seems to be missing libraries. There may still be other stuff in packages that I have not installed. Feel free to open another ticket if that is the case.
