LinHES - Bug # 503: Can't eject avi/mkv optical discs

Status:	Closed	Priority:	Normal
Author:	harveythedog	Category:	
Created:	08/14/2009	Assignee:	jams
Updated:	03/20/2010	Due date:	12/31/1969
Description:	Both my recently updated 6.00.08 installs refuse to eject discs with avi, mkv type video files that are mounted to Mythvideo? They seem to mount OK and I can play the video files on them no problems (this is great, I have heaps of stuff on disc).		
	"Eject media" in the optical discs menu pops up a warning "Failed to eject:MY_DISC" (MY_DISC being the disc label).		
	If I unmount the disc myself (umount /dev/dvd) then I can eject the disc via "eject media" no problems.		
	This is occuring with CDROM and DVDRW drives (both IDE)		
	Playing and ejecting VCD's or DVD's functions correctly.		
	If there's any other info needed, just ask.		
	Phil.

The problem stems from having both /dev/cdrom and /dev/dvd. Comment one and change the other to /dev/sr0.

<code>sudo pacman -Sy filesystem</code>That should take care of it on installed systems. Fixed for new installs.
