

## LinHES - Bug # 505: 6.00.09 - SQL syntax error during boot from CD

<b>Status:</b>	Closed	<b>Priority:</b>	Normal
<b>Author:</b>	tjc	<b>Category:</b>	
<b>Created:</b>	08/15/2009	<b>Assignee:</b>	jams
<b>Updated:</b>	03/20/2010	<b>Due date:</b>	
<b>Description:</b>	Looks like a quoting problem with a generated SQL statement during the DHCP network setup.  BTW - 6.00.09 needs to get added to the reported versions...		

### History

I have seen the same problem, although I noticed that was immediately after "Will use Intel" which is the graphics driver selection, it also happens for users with nvidia "Will use nvidia."

Upon reboot, to reinstall I chose the Special hardware force Vesa option and it worked. There is another ticket which talked about that issue, not that I can find it.

That, or we're seeing completely different problems.

Is it during setup or on boot?

If it's boot please attach /tmp/dhcpinfo.\* and are you running a dhcp server?

If it's not during boot attach mv\_Debug.log and a better description.

What I got was during the initial install, it would hang after trying to start X using the Intel driver. On 6.00.08, it would hang with "Will use Intel" being the last thing on the screen, on 6.00.09, there are a few lines after "Will use Intel" and it hangs there. For me, installation could be completed by forcing the Vesa driver during install.

I'm unfamiliar with the mv\_Debug.log, and was unable to find it in a search.

Additionally, what the few lines are after are as follows (where 192.168.0.1 is the router IP):

Will use Intel

```
[root@larch5 ~]# > setting database values HostNETMASKeth0 to /24 255.255.255.0 for larch5
```

```
> setting database value HostGWeth0 to 192.168.0.1 for larch5
```

```
> setting database value HostDNSeth0 to 192.168.0.1 for larch5
```

Where is the quoting error for the network?

#### 08/27/2009 02:06 am - dougifunny

Apparently I don't know what I'm talking about, and don't know what a quoting error is. I guess seeing three out of four matching got me (database, DHCP, setup) and I just misinterpreted his statements to be similar to mine. I apologize for the confusion.
