LinHES - Bug # 520: user cannot use "special" characters in passwords in the installation GUI

Status:	Closed	**Priority:**	Normal
Author:	graysky	**Category:**	
Created:	08/22/2009	**Assignee:**	
Updated:	06/10/2010	**Due date:**	
Description:	When setting up a password (either for root or a user) in the setup GUI, users cannot use "special" character such as #~%^*#,. etc. in the password or else the password is rejected. That said, the user can su to root AFTER the install and change the password using a "special" character via the passwd command, just not during the formal install. Minor bug.
