

LinHES - Bug # 591: DVD drive automatically closes after eject

Status:	Can not duplicate	Priority:	Normal
Author:	paulsid	Category:	
Created:	12/03/2009	Assignee:	
Updated:	12/13/2010	Due date:	
Description:	<p>My DVD drive closes automatically within 0-10 seconds after eject regardless of if it's done via the menu or manually.</p> <p>Fix appears to be to [[https://bugs.launchpad.net/ubuntu/+source/linux/+bug/356631 update the udev package]] to a version later than 141-1. Latest one in the main Arch repo is 145... if I have a chance this weekend I will try installing this over R6 to see if it indeed fixes the problem.</p>

Tried udev 146 from main Arch repo and it did not solve the problem. (It also created a bunch of worrysome messages about missing devices.) Was able to revert to the normal package.
