LinHES - Bug # 62: xorg.conf and mdadm.conf not restored

Status:	Closed	**Priority:**	Normal
Author:	mihanson	**Category:**	
Created:	12/19/2008	**Assignee:**	jams
Updated:	03/20/2010	**Due date:**	

Description:	Upgrade
	master_baackend | run frontend | 800x600 | no mythwelcome | no remote
	No NFS Server | show shortcuts | Auto updates ALL
	reboot | cd did not eject | ejected it with button on drive
	alsactl: load_state:1559 ... /etc/sound.astate no such file (No audio on the machine)
	/etc/X11/xorg.conf is blank/empty
	/etc/mdadm.conf was not restored from backup
	Unsure about MySQL tables (I need a good command line command to list entries in a table -- I don't know SQL very well)

History

12/20/2008 12:14 am - mihanson

All the logs from /var/log

01/10/2009 12:55 am - mihanson

After debugging with jams today it seems that mdadm.conf is restored using the latest iso jams sent me. However, the UUID of the RAID array (/dev/md0) was not inserted into /etc/fstab (It was blank -- UUID= /myth auto ...blah,blah). Xorg.conf was not restored, but I found it in /etc.old/X11/xorg.conf

The backup and restore scripts hadn't been ported for Arch Linux yet.

Arch does a number of things differently from the old Debian base:

  * Location of certain binaries is different
  * Location of LinHes scripts is different
  * Location of the DB data files is different
  * Daemon start/stop are different

I'm testing an updated and ported version of the script now, but the backup and restore lists still need to be reviewed.

A straight restore of xorg.conf mostly like won't work coming from KnoppMyth to LinHES.

01/13/2009 10:34 pm - cecil

Must have been the food. I was sitting down eating when I thought of how to merge xorg.conf from KnoppMyth and LinHES. I'll script it up in the next day or two.
