LinHES - Bug # 644: Nuvexport of recordings from HD PVR fails

Status:	No user feedback	**Priority:**	Normal
Author:	craigtv	**Category:**	Packages: Core
Created:	03/13/2010	**Assignee:**	mihanson
Updated:	04/13/2010	**Due date:**	

Description:	Note: I'm on version 6.02
	a mythtv utility is not detecting H264 recordings from the HD PVR properly, and this causes nuvexport to fail. This also affects myth2ipod and other utilities that rely on nuvexport. I found that this was fixed in mythtv (Ticket #6774), but from my interpretation it looks like it's not in .22-fixes. I resolved the issue by replacing:
	/usr/share/perl5/site_perl/5.10.0/MythTV.pm
	with this:
	[[http://svn.mythtv.org/trac/browser/trunk/mythtv/bindings/perl/MythTV/Recording.pm?rev=23616|External Link]]

History

The link got a little thrashed in the migration:

http://svn.mythtv.org/trac/browser/trunk/mythtv/bindings/perl/MythTV/Recording.pm?rev=23616

- Status changed from New to Feedback

Patch applied to stable-0.22. Installs and runs fine on my end. Nuvexport needs testing.

Sorry I haven't given feedback. I moved to production 6.02, and have everything working well, so I didn't want to use the test repositories. Is there a way for me to verify this against my production 6.02? I did apply the patch mentioned in my original report, and it nuvexport works fine.

04/13/2010 10:27 am - mihanson

All we did was apply the patch you referenced. So, if it works for you that's good enough for me.
