

LinHES - Bug # 753: mysql socket path wrong

Status:	No user feedback	Priority:	Normal
Author:	chael	Category:	Packages: Core
Created:	01/30/2011	Assignee:	mihanson
Updated:	02/17/2011	Due date:	02/01/2011
Description:	Mythweb does not launch because PHP is looking for /tmp/mysql.sock and it has been moved to /var/run/mysql/mysql.sock. This can be easily fixed by editing /etc/php/php.ini and changing this line: @mysql.default_socket =@ to @mysql.default_socket = /var/run/mysql/mysql.sock@ It is possible this is due to packages (php or lighttpd) being out of sync and just needing to be rebuilt.
