Description:	The af9013/af9015/tda18271 driver in the v4l repo has a known bug in it. The bug was discovered "here": http://www.pcmediacenter.com.au/forum/topic/40407-leadtek-dtv2000ds/page__st__45__p__308904#entry308904 and a fix for it is "here": http://linuxtv.org/wiki/index.php/Leadtek_WinFast_DTV2000DS Can this be fixed or should it be left until it is officially fixed in kernel?

I should add that this bug is affecting the Leadtek DTV-2000DS dual tuner card (apparently the Kworld PC160-2T is also affected).

- Target version set to 7.1

- Due date set to 01/10/2011

Which release are you using? While I can attempt to fix this for Release 7, odds are this won't get backported to Release 6.

- Status changed from New to Closed

- Due date changed from 01/10/2011 to 08/04/2011

This was fixed in 2.6.38. R7 uses 2.6.39.
