LinHES - Bug # 757: pcHDTV firmware not in LinHES 7 (test) install: HD-2000, HD-3000, HD-5500

Status:	Closed	**Priority:**	Normal
Author:	ywd	**Category:**	Installation/Upgrade
Created:	02/19/2011	**Assignee:**	brfransen
Updated:	08/08/2011	**Due date:**	
Description:	Base install of LinHES 7 testing (LinHES_R7.00.01.iso) and core-testing does not have the firmware for pcHDTV HD-2000, HD-3000, HD-5500 HDTV tuner cards. The firmware was available in previous Knoppmyth base installs by default. Without the proper firmware, LinHES still detects the DVB card and tries to scan for channels. There is no indication to the user that the firmware is not loaded. Scans does not return any channels. Manually installed firmware into /lib/firmware to resolve problem: sudo su -l cd /lib/firmware wget http://pchdtv.com/downloads/firmware.tar.gz tar zxf firmware.tar.gz mv firmware/dvb-fe-or51* . rm -f firmware.tar.gz Regards, Howard

Britney pointed out all that is needed is:

sudo pacman -S hd3000firmware

Request that when the HD-3000 card is automatically detected, the firmware is also automatically installed.

Thanks.

Britney's solution does not work on a fresh install of 7.00.02.iso. I think the problem might be that pacman.conf points to local files for the core-testing and extra-testing repositories and not a server.

My guess about pacman.conf was right. The following bug report outlines how to edit pacman.conf to be correct.
