<b>Description:</b>	<p>When going into the LinHES service configuration screen, selecting any subscreen (Network, DDNS, Screensaver, etc), the new screen pops under the existing screen. So the user still only sees the Network, DDNS, etc screen. User may think it is hung.</p> <p>To find the new expected screen, user can Alt-Tab to change/raise background screen to the foreground and continue. The pop-under occurs with any setting (Network, DDNS, etcc) that a user tries to adjust.</p> <p>General uesrs may not be aware of using the Alt-Tab workaround nor know to try Alt-Tab.</p>
