Description:	I just upgraded my stand alone frontend to R8... nice work so far!! However, I did notice that many of the Firefly's buttons aren't working, only a few of them work so here is my XML config from XBMC. This should allow more for tighter control with the remote

```
<remote device="Snapstream_Firefly">
        <pause>PAUSE</pause>
        <stop>STOP</stop>
        <forward>FWD</forward>
        <reverse>REW</reverse>
        <left>LEFT</left>
        <right>RIGHT</right>
        <up>UP</up>
        <down>DOWN</down>
        <select>OK</select>
        <pageplus>CH+</pageplus>
        <pageminus>CH-</pageminus>
        <back>EXIT</back>
        <menu>MENU</menu>
        <title>PLAY</title>
        <info>INFO</info>
        <skipplus>NEXT</skipplus>
        <skipminus>PREV</skipminus>
        <display>MAXI</display>
        <start>FIREFLY</start>
        <record>REC</record>
        <volumeplus>VOL+</volumeplus>
        <volumeminus>VOL-</volumeminus>
        <mute>MUTE</mute>
        <power>CLOSE</power>
        <one>1</one>
        <two>2</two>
        <three>3</three>
        <four>4</four>
        <five>5</five>
        <six>6</six>
        <seven>7</seven>
        <eight>8</eight>
        <nine>9</nine>
        <zero>0</zero>
    </remote>
```

To clarify here's a little more information. In the MythVantage Snapstream_Firefly Conf there are some issues.

These buttons don't work

Vol+

Vol-

CH+

CH-

INFO

Pushing the Stop button performs the function of the INFO button.

The mute button shows on the screen as "mute on" but it doesn't mute the sound

04/28/2013 07:13 am - RacerX

When watching live TV the record button doesn't work to record the show you are watching

Do you have working lirc files that could replace the ones shipped?

Suspected the lircd.snapstrm.conf but it matches what's on the web historically. Some of the keys do the wrong fuction others do nothing.

all teh buttons on that remote function. The problem is lircrc appears to be a cut/paste from other remotes. Those buttons have been "not working" for a very long time.

06/04/2013 09:33 am - RacerX

- File lircrc-snapstrm.txt added

So far so good I tested on R7.5. Additionally, would like to add the Help button to show ALT-H but I'm not quite how to create a button?

06/04/2013 10:07 am - jams

Untested but this should do it.

```
begin
     prog = irxevent
     button = HELP
     repeat = 3
     config = Key ALT-H
end
```

06/04/2013 12:54 pm - jams

- Assignee set to jams

- Target version set to 8.1

- Status changed from New to Closed

packaged files provided by RacerX.

Added in config so that the help button on the remote issues an alt+h

08/26/2013 12:52 pm - brfransen

- Target version changed from 8.1 to 8.0
